

**N**atural glucosamine is derived from crustacean exoskeletons (shells of shellfish). Medical studies show it has anti-inflammatory properties and can help to rebuild and repair cartilage.

### Applications

- Dietary supplement
- Alternative medicine as an anti-inflammatory
- Veterinary medicine — supplement

### Major Form

The material we supply is produced by hydrolysis of chitin, derived from crustacean shells. It is available in two forms — hydrochloride and sulphate. Direct compression grades are also available.

### Manufacturer's Certifications

- ISO 9001
- HACCP
- Halal
- SGS certificate — Global Standard for Food Safety

### Packaging and Storage

- 25kg net drums
- Shelf life — two years
