

We have a dedicated climate controlled facility with state-of-the-art air classifier mill to offer full service grinding and granulating on premise to suit your needs. Save money on these services by letting us be your one-stop-shop. Contact us today for pricing and lead times.

Grinding Facility

- 2,400 square foot in-house grinding facility
- State-of-the art air classifier mill
- Medium size hammer mill
- 4' screener
- Metal detection

Grinding Features

- Available in 80 to 400 mesh
- In-house lab to accurately test full range of mesh sizes from coarse up to ultra fine
- Blend samples sizes up to 20 lbs
- Inquire about our other mesh sizes

Granulation Features

- Granulation or DC "directly compressible" grades are available on most vitamins or powder products
- DC material is a cohesive, granular, compressible material that is mainly used in the tableting process and also increases bioavailability

Quality Features

- GMP, HACCP Compliant
- 3rd Party Certification
- 8 Sigma statistical process control in place
- COA validation

Pricing

Available upon specifying:

- The characteristics of the source material
- The requested mesh size
